

US Packaging EPR Data Generation

Are you compliant with California and Oregon's passed deadlines?

The deadline for submitting packaging EPR data for California (SB 54) and Oregon (SB 582) was May 31, 2026. Most companies have a 90 day grace period, making the last acceptable day to report August 31, 2026. Non-compliance carries severe consequences: daily penalties up to \$50,000, inclusion on Oregon's public shame list, and a California distributor ban. And yes, B2B operations are fully in scope!

To help you meet these deadlines, Claigan provides a comprehensive, turnkey service delivered in three distinct phases:

PHASE 1: SCOPE ANALYSIS AND PACKAGING DATA GENERATION

- Identify the scope of each regulation for your products and distribution model.
- Generate the 'fundamental' data required for California and Oregon.
- Derive data from bills of materials or representative products.

PHASE 2: DATA STRUCTURING & COMPONENT ANALYSIS

Manage diverse data situations under tight deadlines, even when handling partial or missing data.

1. Distinguish between 'detachable' and 'associated' packaging.
2. Handle 'pass through' items that are included with your packaging.
3. Roll up the data for California and Oregon.

**Whatever your situation,
Claigan has a plan. Just reach
out. We are here to help.**

PHASE 3: STRATEGIC PLANS & COST REDUCTION

Develop actionable strategies to meet state-specific targets and minimize the financial impact of environmental fees.

- Formulate an Individual Source Reduction (ISR) plan for California.
- Utilize the option for LCAs to reduce EPR fees.

KEY TAKEAWAYS

- Address the immediate 2026 compliance deadlines.
- Generate fundamental packaging EPR data.
- Roll up the data for California and Oregon.
- Develop Individual Source Reduction (ISR) plans and LCAs.

As the leading provider in plastics and packaging reporting, Claigan helps turn complex regulations into a straightforward, manageable process.
